□ Introduction

The report has been prepared for the Hexther Finance team. The project website is https://docs.gomb.finance. The audited project is a fork of the Tomb Finance Project. The purpose of the audit was to ensure that no issues were introduced with the changes to the original code and that known vulnerabilities (e.g. circumventing the protocol's fee system) are fixed.

Name	Hexther Finance
Audit date	2022-01-24 - 2022-01-24
Language	Solidity
Platform	Fantom Network

Procedure

We perform our audit according to the following procedure:

Automated analysis

- Scanning the project's smart contracts with several publicly available automated Solidity analysis tools
- Manual verification (reject or confirm) all the issues found by the tools

Manual audit

Comparing the project to the Tomb Finance implementation

Classification of issue severity

High severity High severity issues can cause a significant or full loss of funds, change

of contract ownership, major interference with contract logic. Such issues

require immediate attention.

Medium severity Medium severity issues do not pose an immediate risk, but can be

> detrimental to the client's reputation if exploited. Medium severity issues may lead to a contract failure and can be fixed by modifying the contract

state or redeployment. Such issues require attention.

January 2022

Low severity

Low severity issues do not cause significant destruction to the contract's functionality. Such issues are recommended to be taken into consideration.

O Issues

High severity issues

No issues were found

Medium severity issues

No issues were found

Low severity issues

No issues were found

6

Conclusion

The Hexther Finance Project was compared with the Tomb Project. Hexther Finance has changed the implementation of Treasury contract.

The Token contract is affected by the vulnerability that was discovered in the Tomb Project.

In the contract Treasury removed the array of pools excludedFromTotalSupply.

No serious issues were found in the audited changes.
